

Special Session Call for Papers:

Topic: Quantitative Analysis for Faster Development of the South East European Countries (SS-QAFDSEUC)

Session Chair:

Associate Professor: Blagica Novkovska, PhD

Univ. of Tourism and Management, Faculty of Economics, Skopje, Macedonia

e-mail: b.novkovska@utms.edu.mk

Special Session Abstract:

South East European Countries are in part integrated in the European Union and in part advancing towards the joining in near future. Both the European Union's enlargement with the new group of South East European Countries and the accelerated economic development of the new member countries require establishment of powerful data analysis systems as a support for creation of efficient macroeconomic policies. Such a system is expected to be of mutual benefit for both groups of the countries.

From the other hand, the macroeconomic policy implementation requires utilization of modern planning and forecasting techniques, as well as a developed information system as a basis for an efficient macroeconomic and development policy creation and implementation. This will lead to a continuous improvement of the economic policy instruments, as well as the other types of planning and programming of the respective national economies development.

Therefore, the focus of this session is directed to the application of quantitative and qualitative methods for developing scientifically based research and elaborating a more realistic and empirically based development, as well as macroeconomic policies and strategic planning documents in the South-East European Countries. They in turn will lay down real basis for smoothing the EU accession process of the second group of the countries from the region in coherence with the group that already joined the EU.

Special Session Keywords:

Theoretical analysis, statistical exploration and econometric modeling, Economic and other development level indicators exploration and statistical models building, Comparative analyses for the South-East European Countries, New methodologies for macroeconomic and sustainable development analysis, Establishment of macroeconomic policies leading to accelerated economic growth of South East European Countries.
